1. This Office action is in response to amendment filed 14 March 2004, which papers have been placed of record in the file.

2. Claims 1-4 and 6-19 are allowed over the prior art of record. The following is an examiner's statement of reasons for allowance:

Claim 1 is allowable over the prior art of record since the cited references taken individually or in combination fails to particularly disclose a method of testing a head gimbal assembly comprising performing the measurement by means of a laser measurement system, as presented in the environment of claim 1. It is noted that the closest prior art, Ding et al., shows head gimbal assembly testing similar to the claimed invention. However, Ding et al. fails to disclose performing the measurement by means of a laser measurement system as claimed.

Claim 9 is allowable over the prior art of record since the cited references taken individually or in combination fails to particularly disclose a system for testing a head gimbal assembly comprising means for inputting a control command to perform a long seek operation and means for measuring a mechanical frequency response of the head gimbal assembly, as described in Figures 3-5 and pp. 8-10 and presented in the environment of claim 9. It is noted that the closest prior art, Ding et al., shows head gimbal assembly testing similar to the claimed invention. However, Ding et al. fails to disclose means for inputting a control command to perform a long seek operation and means for measuring a mechanical frequency response of the head gimbal assembly as described in Figures 3-5 and pp. 8-10 and as claimed.

Claim 18 is allowable over the prior art of record since the cited references taken individually or in combination fails to particularly disclose a head gimbal assembly comprising a

trimming element for adjusting a mechanical property in order to make a frequency response of the head gimbal assembly approximate to a master frequency response, as presented in the environment of claim 18. It is noted that the closest prior art, Chen et al., shows load beam fabrication trimming similar to the claimed invention. However, Chen et al. fails to disclose a head gimbal assembly comprising a trimming element for adjusting a mechanical property in order to make a frequency response of the head gimbal assembly approximate to a master frequency response as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
